

OZ THEATRE SCREENS

Picture perfect

Standard matte white screen (left) vs Diamond

Diamond is a state of the art twin layer micro diamond PVC designed specifically for the new generation of high resolution home theatre projectors.

Diamond produces the most accurate colour rendition, vivid whites, superior blacks and shadow detail and a very high resolution capacity.

It's silver PVC backing ensures no light escapes through the back of the fabric which increases brightness and saturation levels. Diamond is exclusive to Oz Theatre Screens and is only available with the Majestic fixed frame screen.

Thickness: 220 microns

Gain: 1.2

Viewing angle: 180°

Reflectivity: 91%

Optical structure: micro diamond
