

OZ THEATRE SCREENS

Picture perfect

EVOLUTION 3D

Standard matte white screen (left) vs Evolution3D

Evolution 3D is a state of the art twin layer optically corrected PVC designed specifically for the new generation of high resolution home theatre projectors. The lack of any optical structure ensures pixels are not distorted and therefore displayed with brilliant accuracy.

Evolution 3D enables the limits of the projectors ability to be resolved right before your eyes. Evolution 3D produces the most accurate colour rendition, vivid whites, superior blacks and shadow detail and the highest resolution capacity possible.

It's black PVC backing ensures no light escapes through the back of the fabric which increases brightness and saturation levels. Evolution 3D is exclusive to Oz Theatre Screens and is only available with the Majestic fixed frame screen.

Thickness: 380 microns
Gain: 1.1
Viewing angle: 180°
Reflectivity: 94%
Surface finish: smooth
Optical structure: none
